1 Definitions and Examples

Definition (Category). *A category \mathcal{C} consists of*

- a. a collection $\text{ob } \mathcal{C}$ of **objects** A, B, C, \dots*
- b. a collection $\text{mor } \mathcal{C}$ of **morphisms** f, g, h, \dots*
- c. two operations dom, cod from morphisms to objects. We write $f : A \rightarrow B$ or $A \xrightarrow{f} B$ to mean ' f is a morphism and $\text{dom } f = A$ and $\text{cod } f = B$ '*
- d. an operation assigning to each object A a morphism $1_A : A \rightarrow A$*
- e. a partial binary operation $(f, g) \mapsto gf$, s.t. gf is defined $\iff \text{dom } g = \text{cod } f$, and then $gf : \text{dom } f \rightarrow \text{cod } g$*
